3X
Faster Audits

90%
Proactive Risk Reduction

THE CHALLENGE

Faced immense pressure to protect sensitive Protected Health Information (PHI) and ensure adherence to the strict security rules of HIPAA.

High risk of ransomware attacks that could disrupt patient care, compromise data, and lead to significant regulatory fines.

Lacked the resources to proactively identify and prioritize vulnerabilities across their sprawling network of medical devices, endpoints, and cloud applications.

THE SOLUTION

Deployed a multi-layered solution centered on Managed Identity Threat Detection and Response (ITDR), powered by CrowdStrike Falcon Identity Protection, to protect patient records from unauthorized access.

Implemented Managed Exposure Management (Managed EM) to continuously identify, prioritize, and remediate system vulnerabilities before they could be exploited.

Provided comprehensive, audit-ready documentation and reporting to simplify and support the client's HIPAA compliance reviews.

In healthcare, a data breach isn't just a financial event—it's a fundamental violation of patient trust. Vijilan's focus on identity protection and proactive exposure management gave us the confidence that we were securing our patient data at the highest level. Their compliance reporting made our HIPAA audits smoother and faster than we ever thought possible.

CISO, Regional Healthcare System

THE VIJILAN DIFFERENCE

Proactive Defense Strategy

We shift security from reacting to incidents to proactively preventing breaches by mitigating exploitable risks first.

Identity-First Security

Our Managed ITDR service directly addresses the primary threat vector for healthcare breaches—compromised credentials.

Compliance Expertise

We provide not just security technology, but also the extensive documentation and audit support required to navigate complex regulations like HIPAA.
